

Berroco Remix™

Reduce, reuse, recycle. How are you greening your knitting? Reducing doesn't seem like much fun and reusing generally means you've had to rip out a failing project, a painful part of any knitter's process. Enter Remix, a new, 100% recycled Berroco yarn made using a low-impact manufacturing process patented in France. Remix is the result of over a year of collaborative work between mill and textile engineers. Read a bit more about this new offering:

How is it made? Garments and high-quality commercially knit fabric panels left over from the ready-to-wear industry are collected from across Europe and sorted by fiber, then color. Because these pieces are pre-dyed, there is no need to dye them again, which saves water and prevents water pollution. Instead, colors are created by carefully blending garnetted fibers. Garnetted fiber is the result of shredding old textiles to make a new, fleece-like fiber that is ready to be spun into a new yarn.

All about Remix: Remix is a soft, comfortable blend of nylon, cotton, acrylic, silk and linen. A tweedy, rustic look makes this an ideal candidate for casual knits, and its machine washability means any garment will be low maintenance and hard-wearing. The yarn comes in an abundant 216 yard ball and knits to a worsted weight gauge. Finished garments are immediately cozy, with the feeling of well-loved jeans or your favorite old tee-shirt.
